SUMMARY

Full Stack .NET Developer with 2+ years of experience building enterprise web applications, REST APIs, mobile applications, and IoT integrated solutions using ASP.NET Core, Angular, Flutter, SQL Server, and Azure. Experienced in Asset Management Systems, RFID integrations, AI powered enterprise assistants, and large scale event technology platforms. Passionate about designing scalable, secure, and high performance software solutions.

TECHNICAL SKILLS

- **Programming Languages:** C#, JavaScript, TypeScript, Dart, Python, HTML, (S)CSS, JSON
- **Frameworks & Libraries:** ASP.NET Core, ASP.NET MVC, Blazor, Angular, Flutter, Bootstrap, jQuery, Chart.js
- **Databases:** MS SQL Server, MySQL, MongoDB
- **Cloud & DevOps:** Microsoft Azure (App Services, Storage, Monitoring), CI/CD Pipelines, Azure DevOps, Azure Repos, GitHub Actions, Docker (Containerization), Environment Configuration, Secret Management
- **AI & Intelligent Systems:** Azure AI Foundry, Large Language Models (LLMs), AI Assistant Development, Retrieval Augmented Generation (RAG), Prompt Engineering, Contextual AI Systems, Enterprise AI Integration, Conversational AI, AI Powered Search, Semantic Search, Vector-Based Knowledge Retrieval, AI Workflow Automation
- **Tools & Platforms:** Git, GitHub, GitLab, Docker, RabbitMQ, Firebase, Visual Studio, VS Code, Android Studio, Eclipse, Postman, Swagger, Trello, NPM, Google DevTools
- **Design & Prototyping:** Figma, Photoshop, Diagrams (draw.io / system diagrams)
- **Concepts & Methodologies:** MVC Architecture, RESTful APIs, IoT & Device Integration, SDLC, Agile Methodologies, System Analysis, Database Design & Normalization, Version Control (Git Workflow)
- **Soft Skills:** Problem Solving, Time Management, Debugging & Troubleshooting, Team Collaboration, Leadership, Growth Mindset

WORK EXPERIENCE

Infome Technologies LLC | .NET Software Engineer | Kochi, India **February, 2025 – Present**

Full-Stack .NET Developer contributing to enterprise asset management platforms, AI solutions, IoT integrations, and event technology systems. Focused on building scalable backend services, cross platform applications, and intelligent enterprise solutions.

Key Responsibilities

- Developed secure REST APIs using ASP.NET Core Web API for enterprise asset management, AI solutions, and event management platforms supporting production enterprise applications.
- Established Clean Architecture, Repository Pattern, Docker, and Azure DevOps CI/CD pipelines, automating deployments for ASP.NET Core Web APIs and Angular production applications.
- Built cross platform Flutter and .NET applications for Windows and Android, delivering enterprise mobile and desktop solutions.
- Developed AI powered features using Google Gemini AI, LLMs, and RAG to automate information retrieval and improve business productivity.
- Integrated RFID devices, QR scanners, IoT hardware, and .NET Worker Services, enabling real time asset and event tracking.
- Optimized SQL Server databases, stored procedures, and background services, improving query performance and application reliability.
- Collaborated on enterprise architecture, cloud deployment, AI integration, API documentation, debugging, and monitoring across multiple production projects.

Projects

►Smart Asset Management System (SAMS) – InfoAsset

Enterprise grade Asset Management System designed to manage, monitor, and track organizational assets across multiple companies, departments, locations, and users, providing centralized control over the complete asset lifecycle.

Technologies: ASP.NET Core Web API, Angular, SQL Server, EF Core, JWT Authentication, Gemini AI, LLMs, RAG, RFID, DevOps

Contributions

- Designed and developed scalable ASP.NET Core Web APIs and backend architecture to manage the complete asset lifecycle, including registration, assignment, tracking, maintenance, audit history, reporting, and notifications.

- Built secure authentication, JWT based authorization, role based access control (RBAC), and a multi tenant subscription architecture supporting multiple organizations on a single platform.
- Developed Angular dashboards and management modules with real time asset visibility, location tracking, utilization monitoring, and operational analytics.
- Optimized SQL Server database design, indexing, and stored procedures, improving asset retrieval and reporting performance by approximately 30%.
- Implemented background services, scheduled jobs, API integrations, and RFID based asset tracking for automated monitoring, notifications, and physical asset identification.
- Designed and integrated an AI-powered enterprise assistant using Google Gemini AI, LLMs, and Retrieval Augmented Generation (RAG) with prompt engineering, conversation history, permission-aware responses, intelligent search, reporting assistance, and contextual asset insights.
- Improved asset tracking efficiency by approximately 40%, reducing manual processes, reporting errors, and administrative workload through automation and centralized management.

► Event Check-In & QR Scanning Application – InfoEventz

Mobile application for large scale event attendee verification and entry management.

Technologies: Flutter, REST APIs, QR Scanning

- Developed a high performance Flutter application enabling real time QR code scanning and instant attendee verification for fast event check-in operations.
- Integrated secure backend APIs for participant validation, real time data synchronization, and efficient attendee management.
- Optimized the application to handle thousands of attendee entries with minimal latency, successfully deployed for **Netflix promotional events in Saudi Arabia including Wednesday Season 2 and Stranger Things Season 5 launches.**

► Future Investment Initiative (FII) Guest Entry & UHF RFID Monitoring System – InfoEventz

Enterprise event entry management and UHF RFID based monitoring system deployed during the **FII Global Investment Conference in Riyadh, Saudi Arabia**.

Technologies: Flutter, .NET Worker Services, UHF RFID Integration, .NET MAUI Blazor Hybrid

- Developed a Flutter based multi zone event entry application enabling QR code scanning, instant attendee verification, and real-time check-in/check-out tracking for large scale event operations.
- Implemented UHF RFID badge detection using .NET Worker Services to monitor attendee movement and support event security through automated RFID tag detection.
- Built a .NET MAUI Blazor Hybrid monitoring interface to track UHF RFID tag reads, monitor anti theft gate activity, and manage multiple RFID gate devices with real time backend synchronization.

► RFID Anti-Theft Integration – InfoBookz Library Management System

RFID-based security integration developed for library inventory monitoring and automated theft prevention.

Technologies: .NET Core, RFID Integration

- Integrated RFID detection devices with the InfoBookz Library Management System through secure backend APIs to enable automated inventory monitoring.
- Implemented logic to detect un-checked-out books passing through RFID security gates, ensuring real time validation of issued library materials.
- Developed visual alert and alarm mechanisms for unauthorized book movement, improving inventory control and reducing manual security checks.

► Invoice Management & PDF Generation Application – InfoPos

Mobile application developed for creating, managing, and exporting professional invoices with automated calculations.

Technologies: Flutter, PDF Generation

- Developed a Flutter based mobile application for creating and managing invoice data through user friendly input forms.
- Implemented automatic VAT calculations and dynamic invoice generation to ensure accurate billing and financial summaries.
- Built functionality to generate, preview, and export invoices as PDF documents for easy sharing and record keeping.

Aitrich Technologies Pvt Ltd | ASP.NET Core Full Stack Developer | Thrissur, India **December, 2023 – 2025**

Developed and contributed to the creation of a Job Portal Application during my intern period at Aitrich Technologies.

- Contributed to the development of an ASP.NET Core Job Portal application using C#, SQL Server, HTML, CSS, and JavaScript.
- Participated in Agile sprint planning, daily stand ups, testing, deployment, and SDLC activities to deliver project milestones.
- Implemented backend modules and collaborated on code reviews and Git-based version control to maintain code quality.

Freelance Projects | ASP.NET Core Full Stack Developer | Saudi Arabia **November, 2024 – 2025**

- Delivered custom ASP.NET Core web applications and REST APIs for Saudi Arabian clients, meeting diverse business requirements.
- Designed automated PDF reporting solutions using FastReport Community Edition, reducing manual report generation.
- Configured and maintained IIS hosted ASP.NET Core applications for reliable production deployments.
- Designed and optimized MySQL databases to support efficient data storage and query performance.
- Tested and validated REST APIs using Postman to ensure functionality, performance, and data integrity before deployment.

EDUCATIONAL BACKGROUND

ASP.NET Core Full-Stack Web Development. **December, 2023 – 2025**
Aitrich Technologies.

Bachelor of Computer Applications (BCA) **July, 2023 – 2026**

CERTIFICATIONS

Microsoft Azure Essentials Professional Certificate – Microsoft & LinkedIn Learning **2026**
Completed professional training covering Microsoft Azure fundamentals, cloud computing concepts, Azure services, deployment, security, storage, networking, and cloud best practices.

AI Agents Intensive Course – Google (Kaggle Learn) **2026**
Training focused on AI agent architectures, Gemini based agent development, tool integration, and multi-agent systems.

System Analyst Certification **2024**
Learned how to analyze business processes and design effective IT solutions.

ASP.NET Core Developer Certification **2024**
Gained expertise in building, deploying, and managing applications using ASP.NET Core and modern development practices.
